

Taping has never been so easy!

Taping Machine KTL 10

- Standard table-top taping machine for the efficient production of cable harnesses
- Small, quick and reliable for completing the most diverse taping tasks
- The perfect machine for efficient and cost-effective production
- It offers a customized solution and reproducible repeat accuracy for every application that requires length measurement of individual laps
- A combined system for length measurement and feed makes for a compact design and maximizes versatility
- The selection of proven components for our machines guarantees virtually maintenance-free and reliable operation
- Our machines are customized to your product according to the type and requirements of your application
- KABATEC can provide comprehensive in-house services ranging from project management, design and production to customer service

Specifications KTL 10

Application	Taping of cable kits and modules
Rotational speed	100–1000 rpm, variable speed control via foot pedal
Winding head	Is placed automatically in tape attachment position
Feed	0–40 mm/revolution, variable adjustment
Feed activation	Pneumatic
Cable harness diameter	Up to 20 mm (as per customer requirements)
Tape width	9–19 mm (or as per customer requirements)
Adhesive tape materials	All off-the-shelf adhesive tape
Connection	Single-phase 230 V, 6 bar compressed air
Tape end detection	Optional
